DETAILED ACTION

1. Claims 1-21 are presented for examination.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Iliadis [US 5,995,486].

As for claim 1, Iliadis teaches a method comprising:

receiving data in a receive buffer; and

sending [col. 2, lines 32-37] a hold command to a transmitting node currently sending data to hold transmission of additional data when a level of said data in said receive buffer reaches an adjustable high threshold level [col. 4, lines 10-15].

- 4. As for claim 2, Iliadis teaches said adjustable high threshold level is adjustable in response to a transmission rate of said additional data [col. 3, lines 21-29].
- 5. As for claim 3, Iliadis teaches receiving a hold acknowledge command acknowledging said hold command, and wherein said adjustable high threshold level is adjustable in response to an elapsed time interval between sending of said hold command and receiving of said hold acknowledge command [round-trip delay in TCP acknowledgement based flow control: col. 1, lines 50-52; col. 3, lines 21-29].

Application/Control Number: 10/815,271 Page 3

Art Unit: 2182

6. As for claim 4, Iliadis teaches holding transmission of said additional data until said data in said receive buffer reaches a low threshold level [col. 4, line 61-col. 5, line1].

- 7. As for claim 5, Iliadis teaches said low threshold level comprises an adjustable low threshold level [col. 4, lines 10-15].
- 8. As for claims 6-21, Iliadis also teaches an apparatus, an article, and a system for performing a method discussed above.

Double Patenting

9. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1, 6, 11, and 17 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-19 of copending Application No. 10/815,909. Although the conflicting claims are not identical,

Application/Control Number: 10/815,271

Art Unit: 2182

they are not patentably distinct from each other because the claims 1-19 of the copending application are claiming common subject matter substantially/functionally equivalent limitations as the present claims.

Page 4

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Conclusion

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ilwoo Park whose telephone number is (571) 272-4155. The examiner can normally be reached on Monday through Friday from 9:00 AM to 5:30 PM. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kim Huynh can be reached on (571) 272-4147. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300. Information regarding the status of an application may be obtained from the Patent Applications Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
